Carlos Canales

Clscarlos0414@gmail.com | 817-368-3508 | Dallas, TX |www.linkedin.com/in/carlosrcanales/|

Education

- **University of Texas at Arlington – Arlington, TX** Expected Graduation: December 2028
  - Bachelor of Science in Electrical and Computer Engineering
  - Member – Society of Hispanic Professional Engineers (SHPE)

- **Technical Skills**
  - KiCad Design, CAD, LTSpice, C, C++, Python, SQL, PCB soldering, Data Analytics, Power Bi, Microsoft Access

Experience

- **Canales Furniture | Arlington, TX | *Orders Team*** *May 2026 – Present*
  - Place and manage purchase orders through our ERP system and vendor order pads, maintaining accurate records orders based on product performance and franchise demographics
  - Created and utilized an application program that allowed my team to create visual graphs and representations of product performance with metrics that include salespersons performance, franchise store performance, and identify pricing outliers
- **Canales Furniture | Arlington, TX | *Project Associate*** *May 2022 – May 2026*
  - Collaborate cross-functionally to improve reporting accuracy and efficiency within our ERP system
  - Support project organization, data documentation, and office coordination
  - Streamlined a large-scale ERP system migration by building an Excel-to-Access-to-Excel pipeline, using SQL to calculate margins, pricing, and stock levels across 90,000+ line items reducing manual data entry and improving accuracy over formula-based methods
  - Develop data-driven reports and visualizations with Excel formulas and SQL to support inventory

Projects

- **USB-C to 3.3 V Regulator Board | KiCad 10** Oct 2026
  - Designed a 2-layer, 25 × 20 mm USB-C power board that turns 5 V into a regulated 3.3 V output. I chose the regulator from a worst-case heat calculation and sized the capacitors from datasheet requirements, using hand-solderable SMD parts.
  - Applied heat and layout techniques: ground pours on both layers, a solid-connected regulator tab with thermal vias, and wider traces for power than for signals. Verified the design with design-rule and schematic-match checks.
- **555 Timer LED Blinker PCB | KiCad 10 | Self-Directed** Sep 2026 – Oct 2026
  - Designed a 2-layer, 40 × 30 mm PCB for a battery-powered NE555 oscillator, from circuit calculations and schematic capture through placement, routing and design-rule verification.
  - Applied layout fundamentals: decoupling placement for minimal loop inductance, separate power/signal trace widths, and a solid ground pour for low impedance return paths
- **Product Database** June 2024 – Aug 2024
  - Created a full inventory database containing over 90,000+ items with descriptions, prices, inventory per franchise store, product metadata, and mirrored it using Microsoft Azure, PostgreSQL, Access, and Fabric to enable coworkers to query and work with the data in real time.

Volunteer Experience

- **Canales Furniture | Arlington, TX | Back-to-School event** June 2026 – August 2026
  - Assisted in organizing and distributing school supplies, including backpacks, notebooks, pencils, and other educational necessities to K-12 students, supported an annual community outreach event benefiting local families and students, and helped facilitate scholarship distribution and resources for incoming college students.
